

New COST Action!

Network for forest by-products charcoal, resin, tar, potash (EU-PoTaRCh) CA 22155

WHAT WE DO?

CA22155 Action establishes a network for the past, present and future of use of major non-timber forest raw materials and products in Europe.

Whilst it will focus on forest by-products mainly Potash Tar Resin Charcoal (PoTaRCh)—as representatives of traditional forest exploitation heritage, it will touch upon other forest by-products (tannins, pitches).

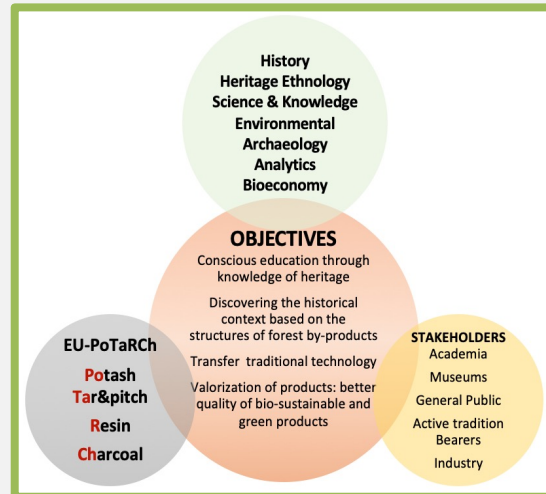

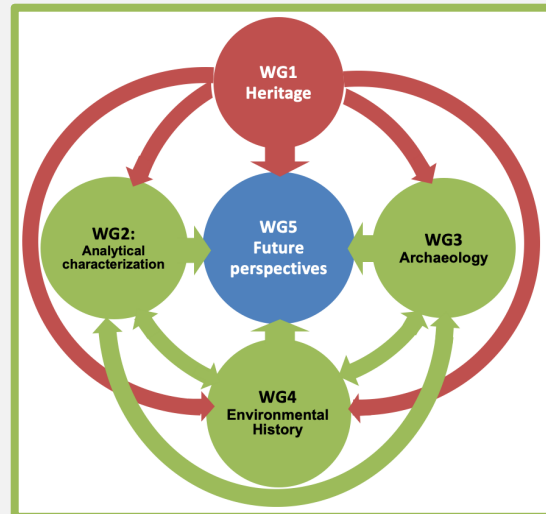

WHAT FOR?

The goal of **CA22155 Action** is to identify and assess production changes and their social and environmental impacts on sustainable development, and based on their heritage, to draw lessons for the future.

FOR WHOM?

The **CA22155 Action** will support researchers, stakeholders (museums, state forests, associations, etc.) and tradition bearers who know and are interested in these products in their research, discovery, use in production, education and heritage promotion.
